

WHO AM I?

In work-study at SFR for 2 years in Networks and Telecommunications, I aim to gain more experience within different companies.

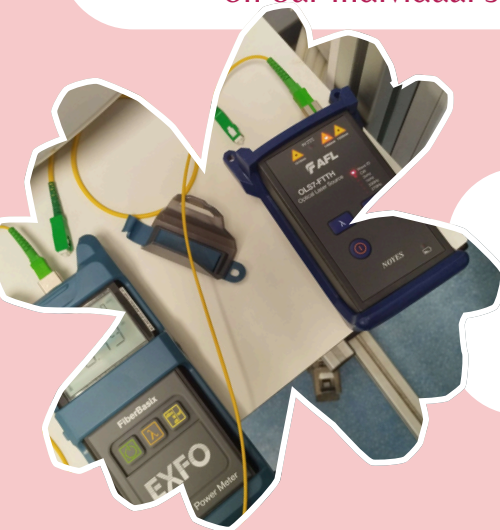

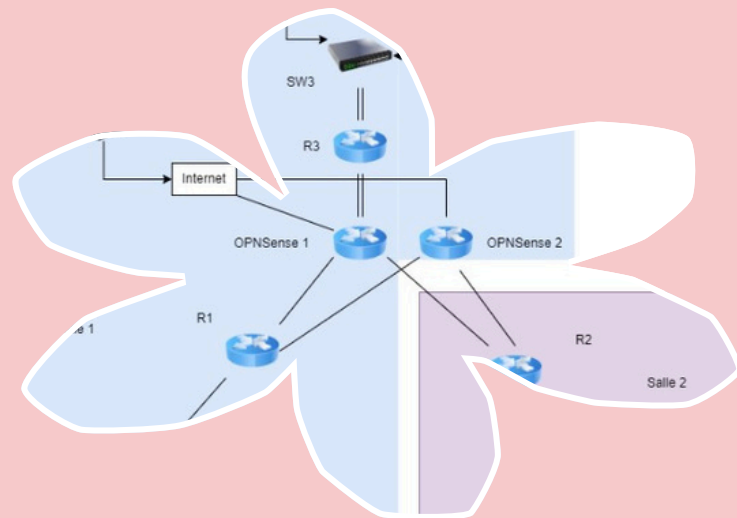

WEB DEVELOPMENT

I implemented a client/server relationship through small games like Pong and Sudoku developed in JavaScript. It was a group project, and my focus was on both the backend and frontend of these games, as shown on the left.

IT INFRASTRUCTURE

I proposed a video conferencing solution, including network security, equipment improvements, and adherence to a predefined budget while respecting a provided set of requirements. This project was carried out in a team, with two members, and we divided the tasks based on our individual strengths.

During my work and at the IUT, I was involved in analyses with equipment to check if the fiber connection was functional and to determine if a technician was needed on-site.

As an independent artist, I create and sell logos, portraits, etc. It's my passion, and I invite you to visit my Instagram page: @Kitsude974.
